

The miniproject has been divided up into the group as follows

Client contributors: Casper & Dimitar have divided their work 50/50

Server contributors: Nicolaj, Lasse & Stephanie have divided their work 33/33/33

Casper:

Socket (20th of December)

Main:

- Variables(21th of December)
- Messages, inputs, etc. (23th of December)

Dimitar:

- Timestamps (27th of December)
- Client connector (27th of December)
- Messages (27th of December)
- Server time (27th of December)

Lasse:

- Set up the client and IP (21st of December)
- send ing and receiving messages through socket code (22nd of December)
- Code that tells that the server is being build (20th of December)
- Made code that accepts the client and is the start of a loop (21st of december)
- Code that sends ID to the client (21st of december)

Stephanie:

- Setting up time (20th of December)
- Thread detach in clientConnector (22nd of December)
- Int clientConnector (22nd of December)
- Loop for when a client disconnects (22nd of December)
- Listens for incoming connections and initialize client list (20th of December)
- 'Server is full' message (21st of December)

Nicolaj:

- Setting client constants (20th of December)
- Put in a timestamp for the messages (22nd of December)
- Made code that shows messages and send them(22nd of December)
- Modified a bit of the microsoft code to be better for our server (20th of december)
- Made code that can reset the number of clients, assign ID of clients and raise the number of clients(21st of December)
